

USING SAFETY FEATURES CORRECTLY

Today's vehicles are filled with safety features that help protect the driver, passengers and even pedestrians, but only if used correctly.

Do not rely on safety features to replace the driver

You as the driver are still the car's best safety feature!

Understand the features before using them

Not all vehicle safety features operate the same way so read your vehicle manual to learn which features are available and understand how they work.

Maintain your vehicle

It is important to keep safety features working correctly - including clearing the vehicle of mud, ice and snow.

Pay attention to alerts and warnings

As these could signal a potential problem with certain features.

Educate those driving your vehicle

Especially teens and inexperienced drivers about the safety features present and how they work.
